			ART UNIT	PAPER NUMBER
			2625	

DATE MAILED: 01/31/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b> 09/824,284	<b>Applicant(s)</b> KONDO ET AL.	
	<b>Examiner</b> Yon Couso	<b>Art Unit</b> 2625	

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**  
**Period for Reply**

**A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.**

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 04 June 2004.  
 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.  
 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-35 is/are pending in the application.  
     4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.  
 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.  
 6) ☒ Claim(s) 1-35 is/are rejected.  
 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.  
 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.  
 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
     Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
     Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).  
 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
     a) ☐ All    b) ☐ Some \* c) ☐ None of:  
         1. ☐ Certified copies of the priority documents have been received.  
         2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.  
         3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

1. Applicant's arguments filed June 4, 2004 have been fully considered but they are not persuasive.

a. With regard to newly added limitations "wherein the coded data has no additional information representing the prediction method", applicants argue that specification support this limitation at page 59, lines 20-23; the last paragraph of page 54; and figure 17. Examiner notes that while specification discloses 'decoding without any overhead for decoding', there is nothing in the specification, pointed out by the applicant, to show the support for 'the coded data has no additional information representing the prediction method'.

b. The applicant argues that since Morimoto uses an embedding rule that adds information relating to the prediction method, it cannot meet the present invention's limitation that "said coded data has no additional information representing the prediction method." The examiner disagrees. Morimoto's embedding rule can read on prediction value in the claim. Then Morimoto's coded data will not have any additional information representing the prediction method.

2. Claims 1-35 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The newly added languages “wherein the coded data includes no information on the prediction method” do not have support in the originally filed specification.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --  
(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 5, 12-14, 16-20, and 28-35 are rejected under 35 U.S.C. § 102(b) as being anticipated by Morimoto et al., 6,005,643.

The arguments advanced in above paragraph 1 as to the applicability of the reference are incorporated herein.

For claim 1, an embedded coding apparatus for embedding first data in second data, and outputting coded data is provided by Morimoto in at least the abstract. Selecting means for selecting a predicting method for predicting data of interest in the first data, based on the second data; predicting means for obtaining a prediction value corresponding to the data of interest based on the prediction method selected by the selecting means; and prediction margin of error computing means for computing the prediction margin of error based on the data of interest and the prediction value, and outputting as the coded data is provided by Morimoto in at least c. 5, line 63 – c. 6, line 30, and the paragraph bridging cols. 6-7, where a predicted value corresponds to a prediction type, i.e. the prediction error is made from the prediction values, although Morimoto does

Art Unit: 2625

not term them as prediction values, that is what they are, and properly construed as herein. The prediction values correspond to the data of interest and the data of interest based on the prediction method as shown in at least Figs. 1a-1b, and as noted in at least the third full paragraph in c. 6 to the second full paragraph in c. 7, and c. 5, line 63 – c. 6, line 30, and see also the paragraph bridging cols. 11-12, where the prediction method dictates which prediction method, values, and prediction error that is used for outputting the coded data.

For claim 2, since at least for the reason that Morimoto is seeking the data with minimum prediction error or according to the most similar region for the data of interest within the first data for a prediction, the data for producing the prediction value is clearly “nearby” as claimed.

For claim 3, see the rejection of at least claim 1 for providing for judging means for judging whether or not said second data can be embedded as to said data of interest; wherein, in the event that said judging means has judged that said second data can be embedded as to said data of interest, said selecting means makes selection of said prediction method based on said second data is provided by Morimoto where cited above. Simply, Morimoto determine if data can be embedded, and selects a specific prediction method depending on whether or not data can be embedded.

For claim 5, see the rejection of at least claim 1. Wherein said judging means judges whether or not said second data can be embedded as to said data of interest, based on said data of interest and said first data used for prediction of said data of interest is provided by Morimoto where cited above, by clearly

determining the data of interest for where the embedded data will be and determining if it can be embedded, and other first data is clearly used in the process of prediction, since that is clearly required to ascertain the prediction error as taught by Morimoto.

For claim 12, wherein the first data is image data is provided by Morimoto by explicitly reference to video and pixel data where cited above.

For claim 13, wherein the first data and the second data is one part and the other part of the image data separated into two is provided by Morimoto where cited above, where the first and second data are embedded as one, and other parts of the image are separated in terms of pixels and macroblocks for example.

For claim 14, separating the image into two parts, for embedding the second data as the other part as to the first data as the one part is provided by Morimoto where cited above, where the image data is clearly separated into a plurality of parts including pixels and macroblocks for example, and the embedded data as the other part is embedded into the first data as one part.

For claims 16 and 34, see the rejection of at least claim 1.

For claim 17, see the rejection of at least claim 1, and the second and third full paragraphs in c. 4 of Morimoto for a computer program.

For claim 18, see the rejection of at least claim 1 for a corresponding coder of the prediction values and embedded second data. Furthermore, recognizing a prediction method for predicting a prediction value corresponding to the first data, from data of interest in the coded data; and decoding the data of

interest into the original first data, and also decoding the second data based on the prediction method recognized by the recognizing means is provided by Morimoto in at least the first full paragraph in c. 4 and section 2 in cols. 7-8, the last full paragraph in c. 12, and the first full paragraph in c. 13, where it is clear that both the first and second data are decoded and restored to their original form prior to coding.

For claim 19, judging whether or not the second data is embedded as to the data of interest; wherein in the event that the judging means judges that the second data is embedded as to the data of interest, the second data is decoded based on the prediction method is provided by Morimoto where cited above, where it is clear that the second data is decoded based on the prediction method – the basic premise of Morimoto.

For claim 20, wherein the judging means judges whether or not the second data is embedded as to the data of interest, based on the data of interest and the first data already decoded is provided by Morimoto, because the embedded data is part of the coded data, and therefore must be decoded before the data of interest and the embedded data can be determined.

For claim 28, see the rejection of at least claim 12 for image data, which is explicitly provided by Morimoto.

For claim 29, wherein the first data and the second data is one part and the other part of the image data separated into two is provided by Morimoto where cited above, where the first and second data are embedded as one, and

Art Unit: 2625

other parts of the image are separated in terms of pixels and macroblocks for example.

For claim 30, joining means for joining said decoded first data as said one part and said decoded second data as said other part, to configure the original said image is provided by Morimoto by decoding and extracting with the resulting embedded second data being joined with the first data after decoding and extracting, e.g. Fig. 3, and where cited above.

For claim 31, see the rejection of at least claims 1 and 30, wherein in the event that said second data is compressed and embedded in said first data, said decoding means decodes said compressed second data; and further wherein decoding apparatus comprises expanding means for expanding said compressed second data back into second data, said joining means joining said decoded first data and said second expanded data to configure the original said image.

For claims 32 and 35, see the rejection of at least claim 18.

For claim 33, see the rejection of at least claim 18, and the second and third full paragraphs in c. 4 of Morimoto for a computer program.

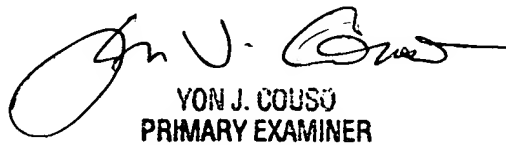

4. Claims 4, 6-11, 15, and 21-27 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, first paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yon Couso whose telephone number is (703) 305-4779. The examiner can normally be reached on 8:30 am –5:00 pm from Monday to Friday

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bhavesh Mehta, can be reached on (703) 308-5246. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-3800.

YON J. COUSO
